As to claim 162, an editing system comprising:

a plurality of modules for selectively performing one or more of editing, composing, and special effects processing on a plurality of clips to produce a first resultant clip, said modules being operable to perform processing on said first resultant clip to produce a second resultant clip (video editing apparatus, col. 3 lines 27-50, col. 4 lines 1-7, col. 6 lines 11-45, and fig. 7-8); and

display means for displaying a table of horizontally aligned rows and vertically aligned columns (col. 7 lines 18-52, and figs. 7-8, 12A-B), said table including at least textual indicia identifying those clips subjected to said processing to produce said first resultant clip (indicated events, col. 7 lines 18-65, figs. 7-8), and said indicia indicating the type of processing performed on said clips, said table further identifying the second resultant clip produced as a result of processing performed on said first resultant clip (captions in video indicates news content, col. 7 lines 18-65, col. 8 lines 1-48, and figs. 7-8), and indicating the type of processing performed thereon, said table further indicating duration of said first resultant clip (time interval of each clip, col. 7 lines 1-52, col. 8 lines 2-33, figs. 7-8, 12A-B).

As to claim 163, this is a method claim of system claim 162. Note the rejection of claim 162 above.

As to claim 144, Taniguchi teaches the editing system according to claim 162, further including a database for registering information for each of said plurality of clips (database, col. 5 lines 42-64, event IDs, col. 7 lines 30-65, col. 9 line 64-col. 10 line 2).

As to claim 146, Taniguchi teaches the editing system, according to claim 162, wherein said plurality of modules comprise an edit module for performing said editing processing of said plurality of clips, a composite module for performing said composing processing of said clips, and a special effect module for performing said special effects processing of said clips (special effect, col. 5 lines 30-64).

As to claim 147, Taniguchi teaches the editing system according to claim 146, wherein said display means displays a graphical user interface respectively representing said edit module, composite module, and said special effect module on a display (figs. 7-8, and 10-11).

Art Unit: 2174

As to claim 149, Taniguchi teaches the editing system according to claim 144, further comprising control means for controlling said plurality of modules based on said information registered in said database (database, col. 5 lines 42-64, event IDs, col. 7 lines 30-65, col. 9 line 64-col. 10 line 2).

As to claim 150, Taniguchi teaches the editing system according to claim 149, wherein said control means updates content of a first resultant clip registered in the database, and updates content of resultant clips produced from said first resultant clip (modified clips, col. 7 lines 5-55, and figs. 7-8).

As to claim 151, Taniguchi teaches the editing system according to claim 149, wherein said control means overwrites content of a first resultant clip registered in the database with content of a new resultant clip, and updates content of resultant clips produced from said first resultant clip (event IDs, col. 7 lines 30-65, col. 9 line 64-col. 10 line 2).

As to claim 152, Taniguchi teaches the editing system according to claim 151 wherein said control means stores said overwritten content of said first resultant clip and said updated content of said resultant clips in the database (col. 5 lines 43-64, col. 7 lines 10-65).

As to claim 154, Taniguchi teaches the editing method according to claim 163, further comprising the step of registering information for each of said plurality of clips in a database ().
